

## Pharmacy Testing – Key Messages

- You can get a COVID-19 test at a participating pharmacy if you **do not** have symptoms
- You will be asked to provide the name of your school/work location.

### **What to bring with you**

- your Ontario **health (OHIP) card** (you can still get tested if you do not have one)
- a **face covering or mask** (wear one at all times)
- **assistive or accessibility devices** (if you need them)
- **snacks** (if you must eat every so often for medical reasons)

### **At the testing location**

Follow public health measures, including:

- wearing a face covering or mask (only take it down below your nose when you are told to)
- keeping at least 2 metres away from people you do not live with
- washing or sanitizing your hands often

### **Getting your test result**

On average, most results are ready 48 hours after your test. This is not guaranteed and could take longer.

Depending on the testing location, you may be able to get your result:

- online on the [Test Results Website](#) if you have a photo (green) health card
- on another website that the testing location will tell you about
- by phone

The testing location will give you instructions that are specific to your situation.

### **While you wait for your test result**

**If you have COVID-19 symptoms and/or were exposed to a known COVID-19 case, including getting a COVID Alert notification**

You should [self-isolate](#) (stay at home) while you wait for your result.

### **If you do not have symptoms and were not exposed**

You can continue as normal while you wait for your result and follow COVID-19 public health measures, including wearing a face covering, frequent handwashing, and

maintaining physical distance from those outside your household. Pay attention to your health to note if anything changes.

### Testing positive or negative

#### Positive

A positive result means it is likely that you **have** the virus.

You must [self-isolate](#) (stay at home) until public health clears you.

Your local public health unit will contact you and ask you contact tracing questions. They will also let you know when you can stop self-isolating.

Contact your doctor or health care provider for more information and guidance.

#### Negative

A negative result means **we were not able to detect the virus at the time of your test.**

You should continue to follow COVID-19 public health measures, including wearing a face covering, frequent handwashing, and maintaining physical distance from those outside your household. Pay attention to your health to note if anything changes.

#### **If you were exposed to a COVID-19 positive person and test negative**

You must continue to self-isolate for 14 days after your last exposure with that person, even if you test negative.
